

Project Name: **Petroleum System Installation**
 Developer/Client: **Gate Petroleum Company**
 Project Location: **Racetrack Road, Jacksonville, FL**
 Project Value: **\$225,000**

Stillwater coordinated with Gate and their civil engineers and architects to prepare petroleum engineering plans for this ground-up c-store facility. Ten (10) MPDs configured in a stacked layout were proposed. Rigid fiberglass product distribution piping was designed in response to industry hesitancy to install flexible piping. Detailed elevation information was proposed for the piping invert at the dispensers, manifolds, and USTs. Petroleum and civil scopes of work were determined via coordination with the owner.
